Push to main
backend.inkwell.ai or frontend.inkwell.ai
GitHub Actions: continuous integration
1. Install dependencies (pnpm)
2. Lint: eslint --max-warnings=0
3. Typecheck: tsc --noEmit
4. Test: 796 backend tests
5. Schema-drift check
6. Build the multi-stage image
push image
GHCR
images tagged latest and git SHA
on success
repository_dispatch
to docker.inkwell.ai
trigger
Deploy workflow: docker.inkwell.ai
1. SSH to the VPS
2. docker compose pull
3. migrate runs, must exit 0
4. compose up -d: api, worker, web
5. Verify /health and /ready
6. nginx reloads with the new upstreams
Build arguments, not runtime configuration
every NEXT_PUBLIC_* value is inlined by next build: changing one means rebuilding the frontend image
